

# Connect<sup>+</sup>

CONVENIENT.  
INSIGHTFUL.  
CONNECTED.

## Secure remote access and control – for all Glunz & Jensen offset processors

Connect<sup>+</sup> is a Windows-based application designed to give you full visibility and control of your CtP processor – directly from your computer. Whether you're in the prepress room, at your desk, or working remotely, Connect<sup>+</sup> provides a clear view of the processor's current status, job history, and alerts. It works seamlessly with all Glunz & Jensen offset processors – even those equipped with only a one-line display.

With its network-based design and simple installation, Connect<sup>+</sup> brings modern connectivity to your existing infrastructure. It is an efficient tool for day-to-day monitoring, service access, and remote troubleshooting.

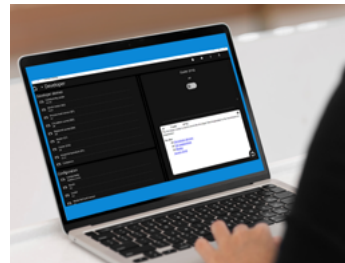

All new Glunz & Jensen processors include a free trial license for Connect<sup>+</sup>. After the trial period, you can purchase a license for 1, 3 or 7 years. If a license is not renewed, Connect<sup>+</sup> enters legacy mode. For units with a one-line display, this ensures the basic operations to control the unit remain intact.

▲ Monitor and remote control your processor from anywhere on your internal network – even from your office.

▲ Unify your prepress workflow by installing Connect<sup>+</sup> on the same computer as your RIP software.

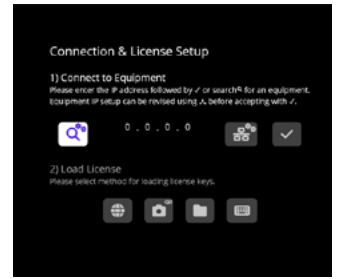

▲ Remotely change programs, adjust settings, test components and calibrate pumps.

▲ Replicates full functionality of a processor's touch screen display – even for processors with basic one-line displays.

Service technicians can access Connect+ remotely via TeamViewer or a similar application to help troubleshoot, adjust settings or update software – saving time and reducing the need for on-site visits.

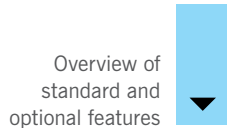

Enables guided training sessions with support staff via a shared interface.

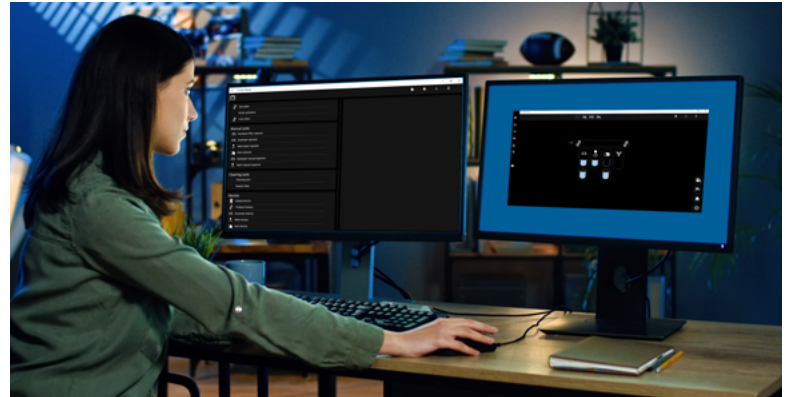

Just install Connect+ on your PC and connect via Ethernet – no need for special infrastructure.

Add redundancy as a backup user interface in the event of a screen malfunction on the processor itself.

Overview of standard and optional features

FEATURES	Included	Optional
Compatible with all G&J offset processors	✓	
Free trial version	✓	
Intuitive interface	✓	
Remote viewing of live processor status and jobs	✓	
Remote control of processor settings	✓	
Access to job data and historical logs	✓	
Supports remote diagnostics & updates	✓	
Enables technician-assisted remote training	✓	
Increase system redundancy with extra control interface	✓	
Manage user access levels and permissions	✓	
1, 3 or 7 year licences		○

✓ = Standard  
○ = Optional

Clear, modern dashboard – access all job data and status updates in an easy-to-navigate user interface.

Use one app to control multiple processors from a single PC.

Note: Specifications are subject to changes without prior notice.
